

# SUCCESSFUL COBOT AUTOMATION STARTS HERE

When you think of automation, you might think of increased productivity and reduced hands-on involvement, and you'd be right. What you might not know, however, is the many other benefits of collaborative robots and how those benefits can impact your automation success.

## 1 EASY PROGRAMMING

Techman Robot's easy to use, all graphic flow, GUI interface allows users, even without coding experience, to use our robot easily and quickly.

## 4 BUILT IN VISION

TM Robot's built in vision integrates seamlessly into both the hardware and software. Many standard vision functions have been integrated into our easy to use interface.

## 2 TIME SAVING

The built-in smart vision system can be customized for visual detection, recognition, and positioning applications without spending time on vision system integration.

## 5 COST REDUCTIONS

Using the TM Robot and TM Plug&Play partners you can accelerate production without having to spend extra money integrating third party vision and peripherals.

## 3 SAFE WORKING ENVIRONMENT

TM Robot complies with safety requirements ensuring robots can be programmed with speed and force limits. With soft end caps and no sharp edges, the cobot is safe for human-robot environments.

## 6 FLEXIBILITY

TM Robot is a cobot that supports rapid production line re-configurations. Its high flexibility in deployment helps improve your productivity across the factory.
