

SPINDLE DRIVEN

LIFTING SYSTEM

PRECISION

Function:

This linear unit consists of an aluminium hollow section with integral, parallel ground and hardened steel guide rods. The carriage has play-adjustable ball-bearing rollers which engage with the guide rods. The rotating trapezoidal/ballscrew causes linear motion of the ballnut, which is connected to the carriage. The slot necessary for this is covered by a stainless steel strip, making the unit dust- and splash-proof. Lateral adjustment of movement for parallel units, or when two carriages are mounted on one unit, is provided by the ballnut mounting.

Fitting position: As required, max. length 3,000 mm
(**EL 30** / max. 1500 mm, **EL 40** / max. 2000 mm)

Carriage mounting: By T-slots and tapped holes

Unit mounting: By T-slots and tapped holes in the mounting surfaces.

Tr 28x10	0,513		

Deflection:

$$f = \frac{F \cdot L^3}{E \cdot I \cdot 192}$$

f = deflection (mm)
F = load (N)
L = free length (mm)
E = elastic modulus 70000 (N/mm²)
I = second moment of area (mm⁴)

Increasing the carriage length will increase the basic length by the same amount.
